## TOV - Writing for the web

**Our central drive is to: Make our customers' lives a little simpler.**

We're clear and simple, friendly and patient, expert and reassuring. We make our services accessible and useful to the widest range of customers. We don't bamboozle with geek-speak or jargon. We're easy to understand, making the complex straightforward. We offer a consistent experience across our website so it always feels like us.

### Simple

Our customers don't want to be bombarded with technical jargon or complicated language. So we keep our tone simple and warm without being patronising. We use short sentences in everyday language.

### Friendly

We want to gain more trust and confidence in our brand. So we're friendly and approachable. We speak in a conversational tone, but never flippant or over familiar, using humour only when it's appropriate. We're looking for a knowing smile, not a laugh out loud.

### Helpful

We don't waste customers' time by repeating ourselves or telling them things they don't need to know. We offer expert advice in a straightforward and honest way. We keep things to the point, without being blunt.

Let's find the best Home services for you

Please tell us your postcode

> Find your address

We need your postcode as prices may vary by region

We consolidated many different form types into simplified set of rules

### Forms are now dynamic with the use of SPA

A single-page application (SPA) (a web application or web site that fits on a single web page with the goal of providing a more fluid user experience. In a SPA, either all necessary code – HTML, JavaScript, and CSS – is retrieved with a single page load, or the appropriate resources are dynamically loaded and added to the page as necessary, usually in response to user actions).
